SERIES 8124A (Cast Iron)
8123A (Steel External)
8127A (Stainless Steel)

Heavy-Duty, Foot-Mounted Sealless Internal Gear Pumps

Model H8124A

Model K8124A

The Universal Mag Drive is the ideal sealing technology within Viking's Universal Seal Series of pumps. It is dimensionally interchangeable with Viking bracket styled heavy duty and Universal Seal pumps, allowing an easy upgrade from packed or mechanical seals to sealless technology. The Universal Mag Drive's hermetic, static sealed canister provides the highest level of liquid containment available by eliminating traditional dynamic shaft seals. It also eliminates housekeeping issues and downtime due to seal failure. This product is designed to handle a broad range of applications requiring continuous duty at pressures up to 200 PSI (14 Bar).

Nominal Flow Rates:

Pump Size	Cast Iron, Ductile Iron & Steel Externals Series		Stainless Steel Series	
	GPM	M ³ /hr	GPM	M ³ /hr
H	15	3.4	15	3.4
HL	30	6.8	30	6.8
K	80	18	80	18
KK	100	23	100	23
L/LQ	135	31	135	31
LL	170	39	170	39
LS	200	45	200	45

Operating Range①:

Cast Iron Series 8124A		
Nominal Flow	(GPM)	15-200
	(M ³ /hr.)	3.4-45
Pressure Range	(PSI)	To 200 PSI
	(Bar)	To 14 Bar
Temp. Range ②	(°F)	-60°F to +500°F
	(°C)	-51°C to +260°C
Viscosity Range	(SSU)	28 SSU to 250,000 SSU
	(cSt)	0.1 cSt to 55,000 cSt

Steel Externals Series 8123A,		
Nominal Flow	(GPM)	15-200
	(M ³ /hr.)	3.4-45
Pressure Range	(PSI)	To 200 PSI
	(Bar)	To 14 Bar
Temp. Range ②	(°F)	-20°F to +500°F
	(°C)	-29°C to +260°C
Viscosity Range	(SSU)	28 SSU to 250,000 SSU
	(cSt)	0.1 cSt to 55,000 cSt

Stainless Steel Series 8127A,		
Nominal Flow	(GPM)	15-200
	(M ³ /hr.)	3.4-45
Pressure Range	(PSI)	To 150 PSI
	(Bar)	To 10 Bar
Temp. Range ②	(°F)	-120°F to +500°F
	(°C)	-84°C to +260°C
Viscosity Range	(SSU)	28 SSU to 250,000 SSU
	(cSt)	0.1 cSt to 55,000 cSt

① Refer to Specification Tables 635.7 individual model information.
② Samarium cobalt magnets required for temperatures over 225° F (107°C)

8127A (Stainless Steel)**

Series Description

The Universal Mag Drive provides the product durability and the flexibility of options customers expect from the Viking heavy duty pumps with the added benefit of providing a direct drop-in replacement that has a dimensionally interchangeable footprint with the Viking bracket styled heavy duty and Universal Seal counterpart. This magnetically driven series pumps eliminate the need for complex shaft seals traditionally associated with hazardous, hard-to-seal, or expensive liquids. These pumps are ideal for applications like caustics, isocyanates, adhesives, solvents and mercaptans.

This Series features 7 different sizes with flows to 200 GPM (45 m³/hr), with three materials of construction options. They may be applied to both thin and thick liquids, and operate in either direction. They are also capable of operating under suction lift conditions.

The Universal Mag Drive series continues the tradition of most robust series of internal gear pumps built by Viking Pump. A summary of the major design features and available options appears to the right.

Viking Universal Seal series pumps carry a three year limited warranty. See catalog section 000 for details.

Major Design Features & Options

- Positive displacement, internal gear pumping principle.
- Gear and pump geometry has been optimized based on more than 90 years of experience. These pumps are designed to provide exceptional reliability and freedom from down time and maintenance.
- Drop in foot print allows direct replacement of a Viking Universal Seal pump without re-piping.
- Foot-mounted design.
- Comes in three materials of construction: Cast Iron, Steel Externals and Stainless Steel.
- Optional material are available for bushings, idler pins, shafts, rotors, idlers and elastomers.
- Available with 90° ports, which can be rotated in 90° degree increments, or with 180° ports (Check individual sizes).
- Ports are threaded or flanged (Flat Faced or Raised Faced). Jacketed casing available in steel and stainless steel.
- Pumps come with an adjustable internal pressure relief valve on standard design. Jacketed pressure relief valves are available in steel and stainless.
- The pump operates in either direction, allowing one pump to be used for both loading and unloading.
- Adjustable end clearance for fluid viscosity or temperature by use of head shims.
- Static O-rings at key points assures liquid containment.
- ATEX Conformity. Pumps conforming to ATEX hazard prevention requirements are available
- Short-term Run-dry Capability. Unlike many mag-drive pumps, the Viking Universal Mag Drive series may be run dry for short periods, such as for clear lines when unloading, or in the case of accidental empty tank situations.

Revolvable Pump Casings Standard on H through LS Sizes

All Universal Mag Drive pumps are equipped with pump casings that can be positioned to meet common piping configurations. H through LS sizes have standard 90° ports which can be turned to any of four positions. Optional opposite ports are available in some sizes and materials. Direction of flow is reversible so any given port can be used as suction or discharge. The relief valve must "point " to the suction port in all cases.

Model Number Key

Model numbers for the Universal Mag Drive series, begin with the displacement, followed by the pump series. The last number of the series indicates the material of construction for the external components. This is followed by the coupling and drive unit designations.

Neodymium iron boron magnets are the standard. For application temperatures over 225 ° F (107°C), Samarium Cobalt magnets are available in all sizes.

- ① For maximum recommended discharge pressures see performance curves. If suction pressure exceeds 50 PSIG, consult factory.
- ② Extra clearances are required above 225° F. Higher temperatures can be handled with special construction, consult factory.
- ③ Ports are tapped for standard (NPT) pipe.
- ④ Ports are suitable for use with 125# ANSI cast iron companion flanges or flanged fittings.
- ⑤ Ports are suitable for 150# ANSI steel or stainless steel companion flanges or flanged fittings.
- ⑥ See p.635.9 for other port size options.
- ⑦ For handling liquids less than 38 SSU (4cSt), special construction features may be required. Provide details for recommendations.

Special Materials and Options Selection Guidelines

For High Viscosities - Above 2,500 SSU (550 cSt)

- Steel fitted construction recommended on Cast Iron and Steel Externals pumps above the following viscosities, according to pump size:

Viscosity	H	HL	K	KK	L	LQ	LL	LS
	SSU	25,000	7,500	25,000	25,000	25,000	25,000	2,500
cSt	5,500	1,650	5,500	5,500	5,500	5,500	550	16,500

- Extra clearances required, depending on viscosity.
- Larger ports may be required depending on suction conditions.
- Pump should be operated at slower than normal speeds, which may require a larger pump.

For low viscosities or non-lubricating liquids – Below 100 SSU (20 cSt)

- Carbon graphite bushings.
- Cast iron idler for iron or steel pumps, or PPS or 770 stainless alloy idler for stainless steel pumps.

For high temperatures – Above 225° F (107°C)

- Samarium cobalt magnets required. Maximum temperature is 500° F (260° C)
- High temperature elastomers – Buna up to 225°F (107°C); Viton® up to 350°F (177°C); PTFE up to 400°F (204°C); or Kalrez® up to 550°F (288°C);
- High temperature relief valve above 350°F (177°C).
- High temperature bushings recommended depending on temperature, size and specific material. See ESB-3 for recommendations.
- Additional operating clearances may be required depending on temperature, size and specific material. See ES-2 for recommendations.
- For temperatures above 450°F (232°C), special materials requirements may be needed. Contact factory for recommendations.

PPS - Reinforced polyphenylene sulfide.
